Phase 1: Ideation Phase

1.1 Define the Problem Statements

Date: 30 September 2026 | Team ID: _____ | Platform: ServiceNow

Users fill the Incident form without guidance. Mandatory fields are skipped, irrelevant fields stay visible and invalid values are caught only after submission, which causes rework and poor data quality.

Customer problem statement

Persona	I am	I'm trying to	But	Because	Which makes me feel
PS-1	Service Desk Agent	Resolve tickets quickly	Tickets arrive with missing details	The form does not enforce required fields	Frustrated and slowed down
PS-2	Employee (caller)	Raise a request correctly	I do not know which fields matter	All fields are shown all the time	Confused and unsure

Problem statement

Design a form that adapts to user input: show, hide, require and validate fields in the browser using UI Policies and Client Scripts, so that complete and correct data is captured at the first attempt.
